Full-Stack TypeScript Engineer

Real-time systems, cybersecurity platforms, and observability.

Full-Stack TypeScript Engineer with 3+ years of experience designing and delivering zero-trust cybersecurity platforms, real-time monitoring systems, and production SaaS applications. Strong in frontend architecture, performance, automated testing, and observability, with hands-on AI-assisted engineering using Claude Code, Cursor, and GitHub Copilot.

- ✔️ React, Next.js & React Native

✔️ Real-Time Systems & Automated Testing

✔️ Node.js & NestJS

✔️ 3+ Years of Experience

✔️ Observability: Grafana, Vector & VictoriaMetrics

✔️ AI-Assisted Engineering Workflows

TRACK RECORD

Professional Experience

3+ years of full-stack and frontend engineering across cybersecurity products, real-time control panels, SaaS systems, and mobile applications.

Frontend & Monitoring Engineer

📅 December 2024 – Present

📍 Neyshabur, Iran (Development Site)

🏢 Amnesh Website (amnesh.ir) 🔗

Amnesh develops enterprise cybersecurity platforms including AMNET, a zero-trust networking platform (amnesh.ir), enterprise security routers, and Mobile Device Management (MDM) solutions.

Key Engineering Contributions:

• Architected the AMNET zero-trust monitoring control panel using React and Material UI.

• Engineered WebGL network visualizations supporting ~10,000 devices.

• Integrated NATS and JetStream for low-latency state streams and remote device command dispatches.

• Built observability and test automation pipelines with Grafana, VictoriaMetrics, VictoriaLogs, ClickHouse, Vector, Docker, and Playwright.

Note: Enterprise control panels require organizational credentials.

Technologies Used:

React

Material UI

NATS

JetStream

Grafana

VictoriaMetrics

VictoriaLogs

Vector

Docker

Playwright

Jest

Full-Stack Engineer

📅 2023 – 2024

📍 Remote

🏢 Freelance

Delivered frontend, mobile, backend, real-time, and testing solutions across client projects.

Key Engineering Contributions:

• Built web & mobile applications using React, Next.js, React Native, TypeScript, and Express/NestJS backend APIs.

• Implemented low-latency audio streaming using Mediasoup, Redis, PostgreSQL, and MongoDB database services.

• Constructed Docker-based testing pipelines using Playwright, custom bot scripts, and physical test devices.

• Configured observability pipelines with Grafana, Vector, VictoriaMetrics, and VictoriaLogs.

Technologies Used:

React

React Native

TypeScript

Next.js

NestJS

Mediasoup

MongoDB

PostgreSQL

Redis

Playwright

Full-Stack Engineer

📅 December 2023 – July 2024

📍 Neyshabur, Iran (On-site)

🏢 AKO

Worked on SaaS products including SMS management panels, technician apps, and marketplace interfaces.

Key Engineering Contributions:

• Built React/Next.js interfaces integrated with Node.js/Express backend APIs.

• Engineered chat components, dynamic tag selectors, and customized UI element suites.

• Managed complex frontend state and API communications under fast-paced production schedules.

Technologies Used:

React

TypeScript

Next.js

Node.js

Express

Ant Design

CASE STUDIES

Featured Projects

Key technical projects spanning cybersecurity products, real-time applications, open-source packages, and operational tools.

CASE STUDY 01

AMNET Zero-Trust Network Platform

Real-time control and monitoring panel for the AMNET zero-trust cybersecurity product (amnesh.ir) at Amnesh.

What it Does & Done:

AMNET (amnesh.ir) is an enterprise zero-trust networking platform enabling network administrators to monitor device relationships, security policies, and infrastructure state in real time.

My Role:

Frontend Architect & Engineer leading UI panel design and real-time state integration.

Tech Stack:

React

Material UI

NATS

JetStream

Docker

Playwright

Sanitized AMNET zero-trust dashboard preview.

CASE STUDY 02

Core functionality complete

Real-Time Multiplayer Mafia Game

Multiplayer social-deduction platform with custom testing and voice streaming.

What it Does & Done:

Multiplayer game platform featuring real-time state synchronization, Mediasoup voice channels, mobile client applications, and bot-driven automated testing environments.

My Role:

Full-Stack Engineer managing backend APIs, Mediasoup voice integration, and bot testing infrastructure.

Tech Stack:

Kotlin

Jetpack Compose

React Native

Node.js

Mediasoup

Redis

Mongo

Playwright

Kotlin/Compose clients.

CASE STUDY 03

react-highlight-within

Open-source React package published on npm for dynamic text highlighting.

What it Does & Done:

Lightweight React component published on npm that overlays dynamic text highlights over input and textarea fields with zero dependencies and custom regex rule support.

My Role:

Author & Maintainer

📄 npm install react-highlight-within

Tech Stack:

React

TypeScript

npm

Vite

Vitest

TypeScript

Live Highlight Output:

React and TypeScript engineer specializing in real-time dashboards, performance optimization, and automated testing.

CASE STUDY 04

Faraz SMS Panel

React operational interface for managing high-volume SMS gateway services.

What it Does & Done:

Management interface for dispatching, filtering, and scheduling high-volume SMS gateway services.

My Role:

Frontend Engineer modernizing operational workflows and API components.

Tech Stack:

React

TypeScript

Material UI

REST APIs

PostgreSQL

BACKGROUND & EDUCATION

About Me

Analytical background, systems thinking, formal engineering education, and language proficiencies.

👤 Professional Background

Full-Stack TypeScript Engineer with 3+ years of experience building production systems across real-time data streaming, observability dashboards, complex client state, and automated testing.

My background is in Mechanical Engineering from Ferdowsi University of Mashhad (Ranked 578 in Iran's National Entrance Examination). I am based in Neyshabur, Iran, and open to relocation opportunities.

🎓 Formal Education

2016 – 2021

Bachelor of Science in Mechanical Engineering

Ferdowsi University of Mashhad

📍 Ranked 578 in Iran's National Entrance Examination (Konkur).

📍 Completed computational engineering and programming coursework.

🌐 Language Proficiency

Persian

Native

English

Professional working proficiency

CONTACT & CONNECTION

Let's Build Something Great

Open to engineering positions, technical contracts, and architectural collaborations.
